Protection of Biodiversity of the Sava River Basin Floodplains

**Sites identified as important for biodiversity along the Sava
River**

Under Task B, the activity B4 was to identify areas of importance for biodiversity along the Sava applying the EU Birds and Habitats Directives.

After implementation of activity B2 with agreeing on the field work methodology (Deliverable B2) and activity B3 with preparing the Natura 2000 habitat type interpretation sheets (Deliverable B3), field work was carried out in all sites along the river of potential biological importance.

The inventory data gathered for each site and the analysis performed for the identified Natura 2000 focal habitat types and species are presented in this report (Deliverables B5-B9). Further based on existing data and field data gathered by the biodiversity working group, the Natura 2000 standard data sheets have been prepared for each site and added to the project GIS database together with site maps of habitat type distribution. These data can be accessed on www.savariver.com.

The table beneath presents the identified sites of importance for biodiversity along the Sava River.
